a Fly-connectome substrate

138,639-neuron LIF model

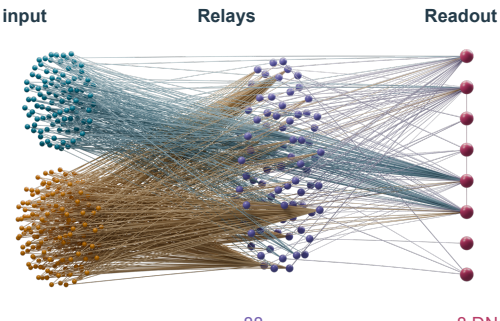

Fly exterior:
illustration only

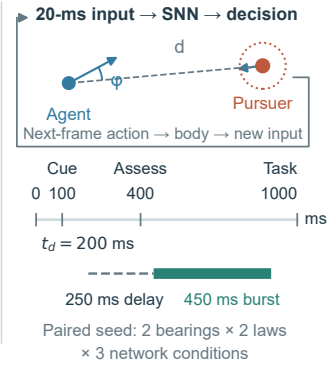

Brain: sampled anchors
8,500 background cells

b Selected visual-to-command graph

410 cells / 1,050 selected connections; schematic layout

c Task and exact clocks

Paired seed: 2 bearings × 2 laws
× 3 network conditions

d Checked evidence interface

Fly traces / tank traces → Declare matrix + bindings
Pairing / clocks / exposure → Common checks + native replay
14 error types tested per adapter → Pass → endpoint analysis
Issues → investigate; no attestation
